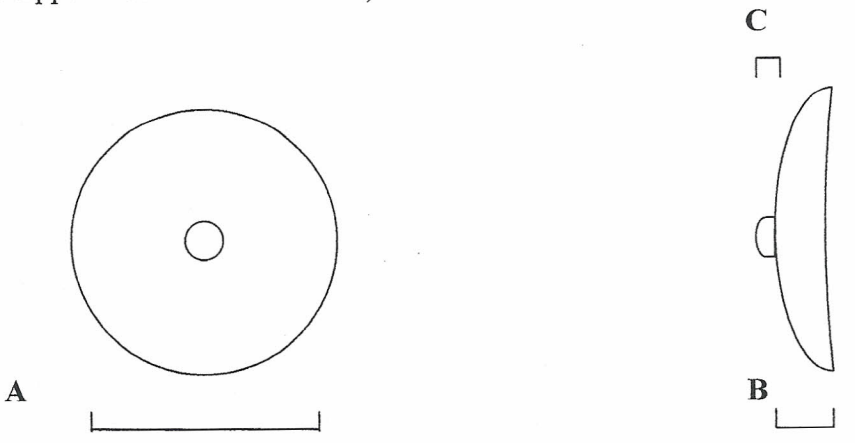
Silicone Carving Implant

(used for nipple-areola reconstruction)



Dimensions (cm)

Product #	A	B	C	Price
600-901	4.6	1.6	0.5	$202.00
600-902	5.6	1.1	0.8	$202.00
600-903	6.1	1.6	0.4	$202.00
600-904	7.7	1.4	0.9	$202.00

Silicone Carving Implant to be used as an accessory during reconstruction of the female breast. Use of this silicone pre-form minimizes the need for harvesting additional tissues from the patient (such as cartilage and darker tissue) to construct a visually acceptable replacement nipple. The implant should be placed under the skin and above the breast implant. The skin should be draped over the implant to conform to the shape of the "nipple". Cosmetic tattooing should be used to mimic the darker tissue of the normal nipple-areola complex. This should allow very close color matching to the opposite nipple-areola complex in the case of a unilateral mastectomy as well as the patients skin tone. The texture of the implant will hold the implant in place. The surgeon may request suture tabs for a "belt and suspender" approach should he/she feel it necessary. Available sizes are noted above and custom sizes available upon request

I/N 300004C

AART, Inc. Silicone Tubing

Quality... the Wise Choice of Many Alternatives

AART Silicone Tubing is manufactured from medical grade silicone elastomer intended for both short-term and long-term applications. AART Silicone Tubing is essentially non-reactive to body tissue and fluids, soft and pliable with a moisture resistant surface, has a long shelf life, may be bonded to itself and is nonadherent to tissue.

AART Silicone Tubing may be used for perfusion and other circulatory blood handling procedures, suction drainage of surgical wounds, prolonged dialysis or drainage of the peritoneal cavity, temporary tube gastrostomy following abdominal surgery, long-term implantation applications within the body, peristaltic pump and laparascopic insufflation, connecting glass tubing of different bores, and other uses deemed appropriate by the treating surgeon.

DIMISIL™ Scar Management System

Dimisil™ Scar Sheeting

- Self-adhering
- Easy to apply
- No over bandaging required
- Comfortable, non-irritating to skin
- Washable for reuse

Indications for use:
Dimisil Gel Sheeting is a self-adhering silicone polymeric compound specially formulated for the management of keloid and hypertrophic scars resulting from traumatic injury or burns to the skin.

Patient Directions:
Gently clean the scar area with mild soap and water and pat dry. Remove sheeting from plastic bag and cut to a size that fits over the area to be treated. Note: be sure to cut sheeting a little larger than the area to be treated to make sure all of the scar is covered. Remove protective film from the tacky side of the sheeting and apply sheeting to affected area for about 8 hours daily. Depending on scar age and depth, scar should begin to become less visible between 7 to 90 days. Use until desired results are obtained. If necessary, sheeting may be cleaned by rinsing with water and drying thoroughly before reuse. Store sheeting in a zip lock pouch when not in use. Apply new sheet when current sheet is no longer tacky.

Caution:
Avoid using near eyes or mucous membranes. Do not use on open wounds. If redness, irritation, or infection occurs discontinue use and consult a physician. Keep this product out of the reach of children. Recommended to be used under the direction of a licensed Physician or Esthetician.

Dimisil™ Scar Gel

Indications:
Dimisil Scar Gel is specifically formulated for the topical management of Keloid Scars and Hypertrophic Scars secondary to trauma of the skin by surgery, burns, abrasions, or lacerations.

Patient Directions:
Wash the affected area and pat dry. Apply a very small amount of Dimisil Scar Gel with a clean fingertip on the affected area. Take care to gently wipe away the excess. Use sparingly as excessive amounts may stain bedding or clothing. Apply twice daily in the morning and before bedtime. Once the affected area is no longer tacky to the touch Dimisil may be covered with a blush, cosmetic foundation or other camouflaging cosmetic.

Warning:
Care should be exercised to avoid getting Dimisil Scar Gel in the eyes or mucous membranes. Care should be taken when using this product on newly healed tissues. Not for use on open wounds or infected areas. For best results, it is recommended that Dimisil Scar Gel be used under the supervision of a surgeon or licensed esthetician. Patients should see their physicians for regular follow up visits after undergoing any surgery or treatment for trauma.

Description:
Dimisil Scar Gel is a medical grade silicone compound. Dimisil forms a very thin water-repellent membrane over skin like an invisible bandage.

Standard Products

- Scar Gel (10ml tube)
- Scar Gel Sheet (6"x6")
- Scar Kit (3"x3" gel sheet & 10ml tube)
- Areola Gel Circle (1" ID x 3 1/3" OD)
- Mastopexy Gel Strip (1 1/2" x 13")
- Breast Scar Reduction Kit (10ml Scar Gel, Gel Sheet for areola & mastopexy)
- Adominoplasty Gel Strip (1 1/2" x 18")
- Gel Sheet (12" x 12")

(Gel Sheet custom sizes available upon request)

I/N 300021B

DIMISIL® SCAR GEL FREQUENTLY ASKED QUESTIONS

What factors are needed to heal scars?
Hydration – Damaged skin loses water more rapidly. Hydration reduces water vapor ands restores the homeostatic (return to normal body state) process in the scar
Warmth – maintaining constant temperate controls hydration and healing
Oxygen – oxygen is needed for continued healing and circulation
Proper wound care – proper and consistent wound care

How does it work?
Silicone Sheeting and Gels
By providing hydration, warmth, and electrostatic energy to reduce inflammation, cover up and allow oxygen to flow through to aid in scar healing.

How soon can the patient begin using the scar gel?
Dimisil® cannot be used on an open wound. You can begin using Dimisil™ generally within two weeks of injury or surgery or once the site has healed close. The sooner the process is begun the sooner results will be seen.

How long before the patient sees results?
Depends on the skin type, age of the scar, type of scar, patient's history of keloiding, etc. No matter how old the scar, the patient should see improvement within 90 days. A 10-ml tube will last about 90 days on a 3 to 4 inch scar. Some see results in a couple days, some take weeks. For deeper more persistent scars, the patient may wear the gel sheet for 8 to 10 hours (at night) and then apply the scar gel twice during the day.

DIMISIL® GEL SHEETING FREQUENTLY ASKED QUESTIONS

How long does a sheet last?
It depends on where you are wearing it and how long. The gel sheet is usable until the tackiness or gel side wears off. Some have been known to last for 3 to 6 months.

How do I clean it?
Rinse with clear water. Do not use soap. When the gel sheeting is wet, it will be slippery. When the sheet is dry, the tackiness will return.

How do I keep the gel sheeting on the scar?
Unless you are wearing the gel sheet under your bra, you will probably have to purchase tape for sensitive skin at the drugstore.

Betacaine® Enhanced Gel 4 Topical Anesthetic. The Easy Choice.

Nothing has been proven to be more effective than Betacaine® Enhanced Gel 4. With its superb performance – without a prescription – Betacaine® Enhanced Gel 4 is as easy on your patients as it is on you.

Feel No Pain With Betacaine®

With new Betacaine® Enhanced Gel 4, you don't have to wait for better pain relief. Betacaine® contains the maximum concentration of topical anesthetic allowed by the FDA for OTC products - at a very competitive price.

Cool. Quick. Clean.

The key to Betacaine®'s performance is the revolutionary dual phase micro-emulsion delivery system.

- **Cool.** Alcohol cools and soothes as it penetrates.
- **Quick.** The topical anesthetic effect is fast-acting-- efficacy increases within minutes of application.
- **Clean.** Petrolatum makes the gel self-occlusive-- no messy dressings required.

Here's What Doctors are Saying about Betacaine® Enhanced Gel.

The gel is wonderful. My patients love it, particularly for collagen injections on the lips.
Richard Aronsohn, M.D.
Los Angeles, CA

Our patients are extremely satisfied with the level of anesthetic relief that your product provides to the sensitive eye and mouth areas prior to wrinkle injection therapy.
Robin A. Sykes, M.D.
Jupiter, FL

We have switched from a prescription strength topical anesthetic and are pleased that we can provide this level of comfort to our patients with an OTC product.
David Wall, M.D.
Clearwater, FL

Betacaine® Enhanced Gel 4 is available in the following sizes:

• 10 gram tube • 30 gram tube

Betacaine is also available in lidocaine 5% anorectal gel in the following sizes:

• 10 gram tube • 30 gram tube • 100 gram pump

If you have not yet sampled Betacaine® Enhanced Gel 4,

contact us today at 866.853.6800 or customer.service@aartinc.net.

Betacaine®

ENHANCED GEL

Betacaine® Enhanced Gel Topical Anesthetic. The Easy Choice.

Patient-tested and physician-recommended, nothing has been proven to be more effective than Betacaine® Enhanced Gel. Without a prescription and with no occlusion necessary, the gel is as easy on your patients as it is on you.

Feel No Pain with Betacaine®.

With Betacaine® Enhanced Gel, you don't have to wait for better pain relief. Betacaine® contains the maximum concentration of topical anesthetic allowed by the FDA for OTC products - at a very competitive price.

Cool. Clean. Quick.

The key to Betacaine®'s performance is the revolutionary dual phase micro-emulsion delivery system. This delivery system reduces the likelihood of skin irritation.

- Cool — Alcohol cools and soothes as it penetrates.
- Quick — The topical anesthetic effect is fast-acting --efficacy increases within minutes of application.
- Clean — Petrolatum makes the gel self-occlusive -- no messy dressings required.

Conveniently available in 10gm and 30gm tubes. Also available, a 100gm pump bottle.

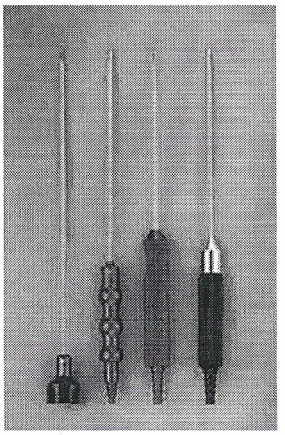
Liposuction Cannulae

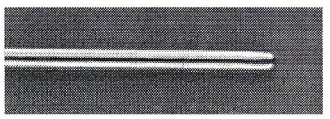
AART uses only the highest quality premium stainless steel hypodermic cannula tubing, which is polished inside and out. This reduces the internal drag for faster and more efficient aspiration and external drag for passing the cannula through adipose tissue more easily.



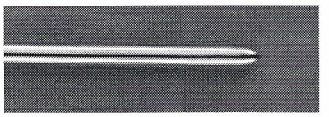
AART offers the highest quality cannula in 4 different styles; One-piece Aluminum Handle, Contour Handle (with half the weight and more control). Two-piece cannulae, and the Luer Lock Cannula. AART offers a complete line of cannulae tips. (Only the most common styles are pictured below). When ordering please specify the tip style, diameter, length, handle style, and shape (ie Spatula, Regular Blunt, Bullet). For example, Mercedes 3mm by 32cm, 1 piece cannula, with a regular blunt tip.

We manufacture cannulae in 2mm, 2.5mm, 3mm, 3.4mm, 3.7mm, 4mm, 5mm, 6mm. Cannula Diameters over 6mm and lengths over 32cm are considered special orders. Please inquire.

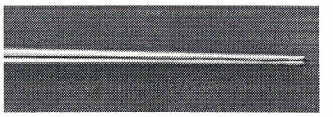
AART Cannula Tips are available in:



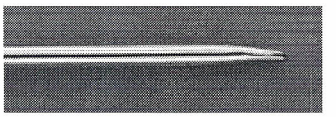
Blunt Tip



Bullet Tip



Spatula Tip



Wedge Tip

Swan Curve

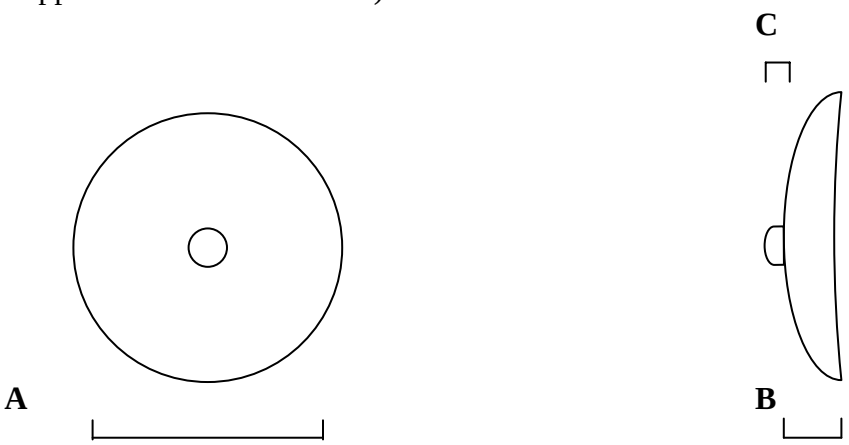
Silicone Carving Implant

(used for nipple-areola reconstruction)



Dimensions (cm)

Product #	A	B	C	Price
600-901	4.6	1.6	0.5	$202.00
600-902	5.6	1.1	0.8	$202.00
600-903	6.1	1.6	0.4	$202.00
600-904	7.7	1.4	0.9	$202.00

Silicone Carving Implant to be used as an accessory during reconstruction of the female breast. Use of this silicone pre-form minimizes the need for harvesting additional tissues from the patient (such as cartilage and darker tissue) to construct a visually acceptable replacement nipple. The implant should be placed under the skin and above the breast implant. The skin should be draped over the implant to conform to the shape of the "nipple". Cosmetic tattooing should be used to mimic the darker tissue of the normal nipple-areola complex. This should allow very close color matching to the opposite nipple-areola complex in the case of a unilateral mastectomy as well as the patient's skin tone. The texture of the implant will hold the implant in place. The surgeon may request suture tabs for a "belt and suspender" approach should he/she feel it necessary. Available sizes are noted above and custom sizes available upon request.

AART, Inc.

RETURNED GOODS POLICY

Authorization must be received from A A R T, Inc. prior to return of merchandise. Merchandise must have all manufacturer's seals and packaging intact.

A. Credit value based on time limit, as follows:

- Units that are returned within thirty (30) days from date of invoice are eligible for full credit or replacement.
- Products that are returned beyond thirty (30) days are subject to a 10% restocking fee.
- Products that are not returned within 4 months (120 days) are not eligible for credit.
- Products that are returned with outer packaging that has been written on or compromised in any fashion are subject to a minimum 25% restocking/repackaging fee.
- Non-sterile products that have been removed from their inner packaging or that have the inner (sealed pouches) packaging compromised are not eligible for refund or credit.
- Sterile products that have had the inner packaging compromised are not eligible for return/refund.
- Custom manufactured products are not eligible for refund.

B. Returns will be handled in one of three ways:

- Based on credit allowable, an equal dollar value will be credited against your outstanding invoices or used to order any other AART, Inc. product.
- If the customer does not choose to exchange for other AART, Inc. product, a credit memo will be issued to his/her account.
- No cash refunds permitted after 30 days from purchase date.

C. The Returned Goods Policy may not apply to promotional offers.

LIMITED WARRANTY, LIMITATIONS OF LIABILITY AND DISCLAIMER OF OTHER WARRANTIES: AART, Inc. warrants that reasonable care was used in the manufacture of this product. Because AART, Inc. has no control over the conditions of use, patient selection, surgical procedure, post-surgical stresses, or handling of the device after it leaves our possession, AART, Inc. does not warrant either a good effect or against an ill effect following its use. AART, Inc. shall not be responsible for any incidental or consequential loss, damage or expenses directly or indirectly arising from the use of this product. AART, Inc.'s only responsibility, in the event AART, Inc. determines the product to be defective when shipped, shall be replacement of the product. This warranty is in lieu of all other warranties not expressly set forth herein, whether express or implied by operation of the law or otherwise, including, but not limited to, any implied warranties or merchantability or fitness of use.
